

The 'Terminator'

- Hand crafted
- High safety tolerance
- Easy safe solution for Xenon disposal
- Safely degas pressurized Xenon lamps
- All lamp debris safely contained within

With Health and Safety issues becoming ever more important, it has become necessary to have a safe way of rupturing lamps prior to disposal. TLS UK have designed and developed the Xenon lamp 'Terminator' to do just that. The Xenon lamp can now be safely destroyed without danger to personnel from the 10 bar lamp rupture or cuts from the loose glass fragments.

The 'Terminator' is a must have tool for any cinema projection department.

The 'Training Lamp'

- Safe staff training tool
- Zero risk of explosion
- Unbreakable centre tube
- Can be manufactured as any lamp type

Changing a Xenon lamp in a digital projector can be dangerous due to the high internal pressure of the lamp. Lamps can explode if not handled correctly. Operators need to be familiar with the use of PPE(Personal Protective Equipment), electrical safety and the mechanical installation of the lamp.

TLS UK has developed a purpose built training lamp. The metal end caps of the lamp can be specified for different projector models and supplied with the correct length power cable.

The 'Training lamp' is a safe and useful tool to aid with training new technical personnel.

Note: The training lamp is not designed to ignite or operate electrically.
